Grand Total (Unique Questions Claimed)	9

1) Where do we use the property of persistence of vision? 1) हम दृष्टि के दीर्घस्थायीपन के गुण का उपयोग कहाँ करते हैं?

- A) In Hyper metropia
- B) In Cinematography**
- C) In cataract
- D) In Myopia

- A) दूरदृष्टि में
- B) सिनेमैटोग्राफी में**
- C) मोतियाबिंद में
- D) निकटदृष्टि में

Domain Name	Batch	Question No
JCECEB_ANM or GNM	Batch 1	Q2822637

Number of Claims: 1

Declared Answer Key: B

Candidate Claim: B

Final Answer: B

Explanation:

The framing of the question and the answer options is appropriate to arrive at the correct answer. Since, there is no discrepancy found between the claimed answer option and the declared answer key, there is no change in the answer key.

Conclusion:

The final answer is option B. There is no change in the answer key.

2) Where does the fertilization take place in Human beings? 2) मनुष्य में निषेचन कहाँ होता है?

- A) Vagina
- B) Cervix
- C) Fallopian tube**
- D) Uterus

- A) योनि
- B) ग्रीवा
- C) डिंबवाहिनी**
- D) गर्भाशय

Domain Name	Batch	Question No
JCECEB_ANM or GNM	Batch 1	Q2822055

Number of Claims: 1

Declared Answer Key: C

Candidate Claim: B

Final Answer: C

Explanation:

Fertilization between sperm and egg occurs in the fallopian tube.

In humans, the steps of fertilization often require the joining of an egg and sperm. The male sperm fertilizes the female egg inside the body of the woman during natural conception. Just outside the ovary, fertilization occurs in the fallopian tube.

Q WHERE DO THE SPERM AND EGG MEET?

A The sperm and egg normally meet in a Fallopian tube and this is where fertilization takes place. Occasionally, the sperm and egg meet and fertilize in other places, for example, at the ovary where the egg is released; this can cause an ectopic pregnancy (see p. 18), that is, a pregnancy that develops outside the womb. Fertilization usually has to take place within 36 hours of the egg being released from the ovary; after this time the egg is too old, and conception is unlikely to occur. Sperm can survive for up to three days in the womb.

Conclusion: The final answer is option C. There is no change in the answer key.

3) Which body organ is surrounded by meninges?

- A) Lungs and spinal cord
- B) Brain and heart
- C) Brain and lungs
- D) Brain and spinal cord**

3) शरीर का कौन सा अंग मेनिंजेज से घिरा हुआ है?

- A) फेफड़े और मेरु रज्जु
- B) मस्तिष्क और हृदय
- C) मस्तिष्क और फेफड़े
- D) मस्तिष्क और मेरु रज्जु**

Domain Name	Batch	Question No
JCECEB_ANM or GNM	Batch 1	Q2822049

Number of Claims: 1

Declared Answer Key: D

Candidate Claim: B

Final Answer: D

Explanation:

The brain and the spinal cord are surrounded by a layer of meninges.

meninges, singular **meninx**, three membranous envelopes—pia mater, arachnoid, and dura mater—that surround the brain and spinal cord. Cerebrospinal fluid fills the ventricles of the brain and the space between the pia mater and the arachnoid. The primary function of the meninges and of the cerebrospinal fluid is to protect the central nervous system.

Meninges

There are three layers of meninges around the brain and spinal cord. The outer layer, the dura mater, is tough, white fibrous connective tissue. The middle layer of meninges is arachnoid, a thin layer resembling a cobweb with numerous threadlike strands attaching it to the innermost layer. The space under the arachnoid, the subarachnoid space, is filled with cerebrospinal fluid and contains blood vessels. The pia mater is the innermost layer of meninges. This thin, delicate membrane is tightly bound to the surface of the brain and spinal cord and cannot be dissected away without damaging the surface.
